while this continues, it will disturb wheat. While wheat conditions do not change, there are still a few hopeful ones left.

The financial stringency of the Balkans and Turkey has some effect on Vienna and Berlin. Large loan world credits and not enough money to do ousiness with are the reasons given for the uneasiness. Some figure that the security downturn is the customary December downswing. Others that it is of far more serious portent.

wheat advances will be permanent. The farmer has crammed his hogs with new corn and is rushing them to market to catch the 71/2 price. He is afraid of a break in the hog price.

Chicago brokerage house opinions over night mainly mention the security selling as being a factor in all grains. It is clear and cold, 5 to 15 above zero all over the west this morning.

New York, Dec. 12.-There is nothng very handsome about the London market as to the Americans this morning. It has nothing to boast of, as the market's rallies have all been, like a cow's tail, downward.

News is not plentiful, although there seems to be a disposition to be very certain that the anthracite coal decision will be handed down Monday next. These forecasts as to the day of rendering the supreme court decisions, and the tenor thereof, are, in the writer's experience, absolutely worthless,

Newspaper comment contents itself largely with characterizing the selling in Union Pacific as short contracts, but of course the action of the stock itself proves such a deduction worse than absurd

As for the future of the market, the endency of it, in the main, to our way f thinking, continues downward.

Soil Treatment

fertility under the Illinois system? And does it show a profit? As the .18 principle is to restore to the soil the necessary elements removed, it is a simple mathematical process to ascertain the cost. On normal soils of Illinois the only elements necessary to replace are nitrogen and phosphorus. Nitrogen must be maintained by leon the upper Mississippi, due to the gume crops, and the best legume for the corn belt is clover. The clover crop should be left on the ground, If removed, not much if any nitrogen is added to the soil. If the crop is removed and fed to average live stock and the manure given average care and hauled back to the field, the loss is nearly one-half of the plant food and three-fourths of the organic matter. If a good crop of clover is left on the ground once every three or four years, only the seed being removed, it will supply sufficient nitrogen for quite large grain crops.

The other element, phosphorus, can be secured in no other way than to Hogs. Cattle. Sheep buy it. In its cheapest form it costs 12,000 4,500 5,000 three to four cents a pound. There 11,500 5,000 7,000 are 17 pounds in 100 bushels of corn, Estimated Chicago Tomorrow, If 50-bushel crops are raised, about 30 increase, \$3.50 profit per acre. Hogs, Cattle.
